HAZARDOUS MATERIALS

Today there is a much broader awareness of the health and environmental risks associated with asbestos, lead, PCBs, mercury, ozone depleting substances (ODS), mould and other hazardous substances. PGL has developed a specialized team to assess building environmental conditions and health risks.

Protect your assets. Minimize your risk.

Building owners and businesses have a legal obligation to ensure employees are not exposed to potentially hazardous materials such as asbestos.

Renovations and demolitions can have a direct impact on the health and safety of any people working in or entering a building if asbestos or other hazardous building materials are present.

PGL provides a range of options from a partial (limited area, such a particular floor of the building) to a complete assessment of hazardous substances that may be contained within the building materials.

Asbestos Management Plan

All buildings that contain asbestos require an asbestos management plan as per the WCB. PGL can work with you to develop this plan, and provide the necessary awareness training to your staff.

We'll handle it. You'll save money.

Our services can be phased or tailored to suit your precise situation and needs. We do this in a manner that delivers comprehensive solutions that can result in significant cost savings.

Site Assessment/Cost Analysis

Depending on the state of your building and the way that it's used, you may require a basic assessment in order to protect workers going into areas such as attics, crawl spaces and ceiling spaces, or a much more detailed report should you

need to renovate or demolish interior spaces. Our hazardous materials specialists can provide our clients with options and related cost analyses in order to make sound business decisions.

Hazardous Materials Management

Your options may include leaving a site as-is, removal during renovations or complete removal. We'll provide full construction specs, tendering and monitoring of the hazardous materials removal as well as offering a full range of site management and air monitoring services. We can also draft and help implement hazard identification and labelling.

Staff Training

We can send a team member to provide your staff with awareness, education and training on the safest procedures in dealing with hazardous materials.
